

Q&A: tp24

Could you tell us how tp24 was founded, and a little more about how it has evolved into its current form please?

In 1987, tp24's Managing Director, Shaun Davis was the Managing Director of a thriving Interior Design company which mainly provided interior fit-outs for Showhomes. In 2005, Davis gradually moved his focus across to lighting design, but still concentrating on the new home developers by providing yet another service to the builders and their customers by installing lighting into the new homes prior to the buyer moving in. When the building regulations changed to make it compulsory for the developers to incorporate more energy saving in new build homes, the tp24 team started to investigate the LED lighting market and how to make the LED bulb fittings more stylish and smaller in size, without compromising on light levels. In recognition of their innovative designs, tp24 received the Best Low Energy Product Award, at Interiors 2013 for their super slim G40 LED lamp.

Today, tp24 continues to thrive as a leading LED lighting designer manufacturer and supplier of low energy light fittings, providing LED lighting schemes to a wide range of clients including the hospitality sector. Whether it's a new build large hotel, a boutique B & B or a funky Wine Bar, the tp24 team deliver inspirational LED lighting schemes to enhance any hospitality environment.

Could you talk about tp24's team, facilities and operational set-up?

tp24's extensive product range of over 500 LED lights is stocked in the UK enabling a quick delivery. With everyone in tp24 working in close proximity to one another means that communication between each team is constant with a 'hands on' approach.

What makes tp24 a good fit for the hospitality market?

With over 13 years' experience of supplying lighting to the UK market tp24's new LED lighting range, Abstract, a Linear, Modular platform enables the customer to design the light fitting required for the space, be it a large, striking piece for reception,

dining and conference areas, wall lighting for a lobby or subtle bedroom lighting.

What would be the key piece of advice you would give to hoteliers with regards to their lighting scheme?

I think the most important piece of advice for hoteliers regarding their lighting is to always keep at the forefront of your mind that the aesthetics of the light should be the second thought not the first when it comes to lighting a space. Yes you want it to look good and work with your overall scheme, but most importantly; does it light the space in a way as to please and assist your customer?

What do you envisage for tp24 going forwards?

Onwards and upwards; the tp24 team are constantly striving to encompass the innovation of the LED lighting market to the forefront of their designs and with the continuous growth of remote controls and app technology, we see this as the next step of the LED lighting generation.
